This listing of claims will replace all prior versions, and listings, of claims in the

application:

**Listing of Claims:** 

1.-40. (CANCELLED)

41. (NEW) A handle for a lacrosse head comprising:

a hollow tube having an interior surface and an exterior surface and extending a

length along a longitudinal axis between a first end and a second end wherein one of said first

and second ends is operable for attachment to a lacrosse head and said hollow tube having a wall

thickness defined in a plane normal to said longitudinal axis between said interior surface and

said exterior surface, wherein said wall thickness varies about said longitudinal axis in said plane

and includes a first range about said longitudinal axis of relatively thicker wall thickness and a

second range about said longitudinal axis of relatively thinner wall thickness, said first range and

said second range operably associated with one another whereby said hollow tube is operable to

provide tactile feedback to a user of said hollow tube as to the orientation of said hollow tube in

the user's hand.

42. (NEW) The handle of claim 41 wherein said wall thickness is

substantially constant about said second range and wherein said second range is at least 180

degrees about said longitudinal axis.

Reply to Office Action of April 10, 2007

43. (NEW) The handle of claim 41 wherein said wall thickness is

substantially constant about said first range and wherein said first range extends about 120

degrees around said longitudinal axis.

44. (NEW) The handle of claim 41 wherein said wall thickness includes a

third range about said longitudinal axis of transition between said relatively thicker wall

thickness and said relatively thinner wall thickness and wherein said third range extends between

about 9 degrees to about 17 degrees around said longitudinal axis.

45. (NEW) The handle of claim 44 wherein said wall thickness is

substantially constant about said first and second ranges.

46. (NEW) The handle of claim 41 wherein said wall thickness is at a

minimum over at least 180 degrees about said longitudinal axis.

47. (NEW) The handle of claim 41 wherein said second range extends about

said longitudinal axis a greater angle than said first range.

48. (NEW) The handle of claim 41 wherein said first range extends about less

than one-half around said longitudinal axis.

49. (NEW) The handle of claim 41 wherein said hollow tube is further

defined as being polygonal in cross-section in said plane.

50. (NEW) The handle of claim 49 wherein said polygonal cross-section of

said hollow tube includes a plurality of sides and wherein over half of the sides of said polygonal

cross-section are in said second range, having said relatively thinner wall thickness.

51. (NEW) The handle of claim 49 wherein said sides of said polygonal

cross-section of said hollow tube in said second range are disposed adjacent to one another about

said longitudinal axis.
